

April 22, 2010

The Honorable Daniel Inouye  
Chairman  
Senate Appropriations Committee  
S-128 U.S. Capitol  
Washington, DC 20510

Dear Chairman Inouye:

Quality measures are critical tools for improving the quality and delivery of health care. Because quality measurement affects all stakeholders across the continuum of health care, federal funding of measure development and testing is essential.

The recently enacted Patient Protection and Affordable Care Act (PPACA) includes an authorization of \$75 million for FY 2011 to identify gaps in quality measurement and develop patient-centered measures to fill those gaps. The undersigned organizations request that your committee fully fund this authorization. These monies will allow the Secretary of the Department of Health and Human Services to provide grants to eligible entities to develop and update quality measures to address specific health care populations and priorities.

The public and the health care professions need measures that meaningfully improve the quality of health care and can be maintained over time as evidence and technology evolve. This requires a well funded and transparent process and infrastructure. Appropriating \$75 million for FY 2011 is a critical first step in meeting this need.

We thank you in advance for your efforts to provide the necessary resources to build a patient-centered health care system focused on quality improvement.

Sincerely,
